

Maintaining the Appearance of Your Products

Great Openings' metal products are coated with an electrostatically applied powder paint finish. This finish will provide excellent consistency and superior chip and fade resistance.

METAL SURFACES

General Cleaning: Wipe cabinet down using a soft cloth soaked in detergent and warm water, then wipe dry. Mild spray cleaners used in your home for appliances can be used too.

Scuff Marks & Scratches: Isopropyl rubbing alcohol can be effective at removing scuff marks, as long as it is 90% strength or higher. Apply generously to cloth and rub on scuff mark to remove. You may also try rubbing a pre-softened paste wax on your cabinet if it has a low gloss paint finish. Automotive polishing compounds (liquid or paste) may prove effective on higher gloss paint finishes. Next, applying a pre-softened automotive paste wax should bring out the sheen once again. For any of the wax or polishing compounds, follow the manufacturers application directions.

PLASTIC DRAWER & DOOR PULLS

General Cleaning: Wipe pull down using a soft cloth soaked in detergent and warm water, then rinse and wipe dry. Be sure to avoid using solvents or abrasive cleaners.

Do not use rubbing alcohol on plastic surfaces. It will dull the finish.
